CGNAT no Debian com nftables

Debian Day Maceió 2024 - Henrique Silva

debian 12

NAT

- Network address translation(NAT) é um método de mapeamento de um espaço de endereço IP em outro, modificando as informações de endereço de rede no cabeçalho IP dos pacotes que estão em trânsito em um roteador.

CGNAT

- Carrier-grade NAT (CGN ou CGNAT), também conhecido como large-scale NAT(LSN), é um tipo de tradução de endereço de rede (NAT) usado por ISPs em redes IPv4.

- Vantagens
  - Maximiza o uso de espaço limitado de endereço IPv4 público.
  - Mapeia dispositivos na rede para interface externa.
- Desvantagens
  - Pode criar um gargalo de desempenho que limita a escalabilidade.
  - Não resolve o problema de exaustão de endereço IPv4.
  - ...

nftables

- nftables substitui o {ip,ip6,arp,eb}tables.

- Vantagens
  - Execução mais eficiente.
  - Sintaxe mais intuitiva.
  - Manipulação avançada de pacotes.
  - ...
- Desvantagens
  - existem?

Casos de uso

- Internet service provider (ISP).
- Manter redes IPv4 funcionando.

ens4: IPv4=172.16.1.2/30
ens5: IPv4=172.16.2.1/30
IPv4: 100.64.1.10/24

Criando o CGNAT

```
# git clone https://github.com/rick0x00/net_cgnat.git

# cd net_cgnat/box/generic/os/debian/native/nftables/

# vim build_cgant.sh

# bash build_cgant.sh
```

Variáveis para ajustar em “build_cgant.sh”

```
### setting variables

# interface name of P2P/PTP
# BORDER connection
wan_interface_name="ens4"
# BNG connection
lan_interface_name="ens5"

# IP Address of P2P/PTP
# BORDER connection
ip_wan_addr_ptp="172.16.1.2/30"
ip_wan_gateway_ptp="172.16.1.1"
# BNG connection
ip_lan_addr_ptp="172.16.2.1/30"
ip_lan_gateway_ptp="172.16.2.2"

### variables of CGNAT
# IP Address to outside NAT(WAN)
ip_wan_addr_1="200.200.200.2/24"
# Network Address do inside NAT(LAN)
# RFC 6598 (IANA-Reserved IPv4 Prefix for Shared Address Space)(100.64.0.0/10)
net_cgnat_1="100.64.1.0/24"
```
